

Weekly Weather Update

2:30 PM CDT Thursday, February 11, 2021

Andy Patrick & Seth Warthen, NWS Lake Charles

Weekly Weather Update

TOP STORY:

- Cold to very cold air expected late this weekend through mid next week.
 - Some freezing or frozen precipitation possible this weekend, but more likely Monday into early Tuesday.
- A good deal of uncertainty at this time, but a high impact winter weather event is possible Monday

	Low Temperatures	High Temperatures	Chance For Rain
Friday	33-43 F	40-49 F	65-80%
Saturday	31-41 F	42-50 F	20-25%
Sunday	26-34 F	38-49 F	10%
Monday	22-35 F	31-44 F	80-85%
Tuesday	14-25 F	37-44 F	<10%
Wednesday	23-33 F	48-58 F	35-50%
Thursday	32-41 F	46-55 F	25-30%
Normals This Time of Year	40-46 F	64-66 F	25%-30%

A slow moving cold front has resulted in moderate rainfall in portions of Lower Acadiana in the last 24 hours.

Some water atop roadways was reported in Evangeline Parish this morning.

River Forecasts

No rivers are *currently* in flood.

Due to recent rainfall, Bayou Des Cannes near Eunice is currently at a stage near 14 feet, and *forecast* to rise to a crest near 18 feet (moderate flood stage) by Friday afternoon. It is forecast to fall below flood stage by Saturday evening.

Upper Level Steering Patterns

A Strong upper level low pressure is centered over south-central Canada.

An additional upper low is noted approaching the Pacific Northwest, as well as one in the Desert Southwest.

Surface Weather Map with Fronts

A slow moving cold front is currently working through SE Louisiana.

Strong surface high pressure will continue to build southward into the Plains, resulting in cold Arctic air spilling southward with it.

6 am Weather Observations

A slow moving cold frontal boundary has resulted in moderate showers and thunderstorms this morning.

Warmer air and southerly winds are noted ahead of the front, with northerly winds and colder air behind the front.

2 pm Weather Observations

Colder air has continued to filter into the region this afternoon.

Some areas of scattered showers remain.

There is a large amount of uncertainty in the temperature forecast following the front, but *much* colder temperatures are expected to some extent.

How much cold air can encroach upon the area and interact with moisture will result in exactly what type of precipitation falls. A mix of rain, freezing rain, sleet, and/or snow will all be possible at times.

GFS Forecast Temperature Anomaly

The intrusion of Arctic air will result in temperatures falling well below normal.

Below normal temperatures are expected to linger well into next week.
